Unryo Inc.
Laval, QC

Dear Hiring Manager,

My name is Fahmi Omer, a first year Computer Science student at the University of Waterloo. As I was scrolling through our co-op board, WaterlooWorks, I came across the software engineering intern position available at Unryo Inc. and thought that I would be a perfect fit, and as I am writing this cover letter, I decided to take a "different" approach that I hope you will enjoy.

"A cover letter is a document submitted for a job application to strengthen one's application and depict their person" and while there may be many formats out there, I made the decision to do it my own way, specifically for this position, unlike the dozens of cover letters I have written in this season's job search.

As highlighted in this posting, all of the skills needed, I possess, I have history in working with docker, Kubernetes, Golang, Hadoop, REST Apis, and a high amount of python. Through my previous experiences in both the workplace, as well as school or personal projects, I have applicable knowledge of all required technologies. On top of this, I have much more to bring as my incredible theoretical knowledge of python and its respective frameworks, OOP principles, and data structures and algorithms.

As for my networking skills and Linux skills. I find myself working in the terminal more than VSCode, writing code through vim and editing software through the terminal as well, and I can assure you I have worked with enough bash Linux scripting to make myself want to bash my computer.

Once you meet me, you'll immediately notice something, and it is that I am a very outspoken person, as the valedictorian of my graduating class, and as the first year rep of the mathematics society, I speak and converse with hundreds of people to ensure that the faculty needs are met. On top of this, I am also proficient in french reading writing and speaking. The only regret you'll have is that I may be even too loud at times.

Now some more about myself. While I may not be the most technically skilled applicant, what I can promise you is that I am one of, if not the fastest learners you will ever meet. Whether it came from nights of cramming or not, my ability to adapt and grow is unmatched. Which may be accredited to my ability to accept criticism, acknowledge my mistakes, and fix what I was doing wrong, as well as my humility, I have no fear in asking for help when needed. I also will work non-stop like no others until I complete my tasks, whether it be making a simple breakfast or programming the next ChatGPT, I work unlike no others to make it happen. These valuable qualities paired with my photographic memory allow me to pick up information and new skills like no others.

Thank you for consideration into this role as well as for bearing with my "unique" style of a cover letter I decided to take up for this position, I look forward to being able to display myself in an interview setting in the near future.

Warm regards,

Fahmi Omer
